Bemis Company Acquires Packaging Operations of SteriPack

Bemis Company, Inc. today announced that it has completed the acquisition of the medical device packaging operations and related value-added services of SteriPack Group, a global manufacturer of sterile packaging solutions for medical device and pharmaceutical applications. The acquisition includes all employees and the facility at the Clara, Ireland location, as well as the packaging business and converting assets located in the Florida and Malaysia locations. SteriPack Group will continue to independently own and operate its contract manufacturing service business.

“The number one goal in our business is to help our customers become more successful. The can-do attitude of the talented people at SteriPack strongly supports our strategic direction, and we look forward to bringing SteriPack’s exceptional product line and Added Value Services (AVS) to our global customer base,” says Paul Verbeten, President of Bemis Healthcare Packaging.

“We believe that Bemis will continue to build upon the strong customer relationships and world class operations established by SteriPack over the last 21 years,” said Garry Moore, Founder and Chief Executive Officer of SteriPack Group.

For now, we advise our customers to continue to perform “business as usual,” as very little will be changing in the short term. Over the next several months, as we integrate SteriPack into the Bemis family, you will receive sufficient notification on how any integration activity may affect you. We expect this acquisition to be seamless to all of our customers.

Bemis Healthcare Packaging continues to be “Committed to Your Success,” as this acquisition will help us provide you with exciting new resources, risk-free supply, and highly valued innovation.
